WHIMZEES TOOTHBRUSHES HAVE BEEN AWARDED THE PRESTIGIOUS VETERINARY ORAL HEALTH COUNCIL SEAL OF ACCEPTANCE FOR TARTAR CONTROL IN DOGS!

The Veterinary Oral Health Council (VOHC) is a professional worldwide organization, which recognizes products that meet their high standards of plaque and tartar reduction in dogs (and cats).

This seal of acceptance assures pet owners that when they feed their dog a WHIMZEES Toothbrush Dental Chew, they are providing their dog a superior, high-quality natural product that has been tested and proven to be effective in helping to maintain canine dental health.

LATEST RESEARCH ON THE EFFECTIVENESS OF DENTAL CHEWS

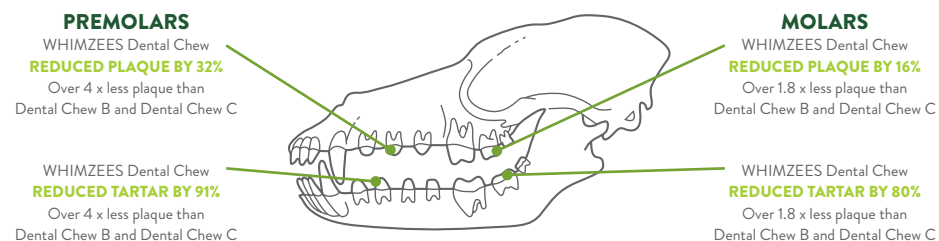

Two studies were carried out at an independent kennel[#] to compare the effectiveness of daily administration of three commercially available dental chews, WHIMZEES and two competitor brands (Dental Chews B & C), in reducing plaque and tartar on teeth, gum inflammation and breath odour in adult dogs.

This study found that at day 28, only WHIMZEES Dental Chews achieved a statistically significant reduction in all four dental health measures of plaque, tartar, gum inflammation and bad breath.

	PLAQUE	TARTAR	BREATH ODOUR	GUM INFLAMMATION
WHIMZEES DENTAL CHEW	19.1%*	78.4%^	37.5%^	64.7%*
DENTAL CHEW B	3.0%	38.2%*	13.1%	10.2%
DENTAL CHEW C	0.6%	48.9%*	16.6%	42.6%*

MORE EFFECTIVE AT REACHING HARD TO REACH PLACES

WHIMZEES was found also to be more effective in reducing both plaque and tartar on hard-to-reach back teeth.

[#] Research carried out at Independent Kennel in 2018;
* t Test statistically significant (P<0.01) compared to control;
^ Kruskal-Wallis statistically significant (P<0.01) compared to control.
